Department of Computer Engineering

Web Development Practical Probable Problem Statements

Class: SE Computer Engg, Div: A & B

Practical Exam Date: 11 & 12 May, 2026.

Problems 1–12: HTML + CSS (Basic)

1. Personal Introduction Card

Create a simple card showing your name, branch, and hobbies. Use **HTML** headings, paragraphs, and **text formatting tags** (bold, italic, underline). Style with **inline CSS** for background color and font.

Hint: Use <div> with style="background: lightblue; padding: 20px;". Use , <i>, <u> tags.

2. College Name Display Page

Design a webpage with your college name as heading. Use **subscript** for year (e.g., 2025_{th}) and **superscript** for reference number. Apply **internal CSS** for center alignment and font color.

Hint: Use <sub> and <sup> tags. Internal CSS in <style> tag inside <head>.

3. Image with Caption and Link

Create a page showing your favorite animal image. Below image, add a **hyperlink** that says "Click here to know more". Use **external CSS** for image border and link color.

Hint: Use . Link using . External CSS file with .css extension.

4. Simple Time Table

Create a college timetable for 3 days (Monday, Tuesday, Wednesday) with 3 periods per day. Use **HTML table** with borders. Apply **internal CSS** for background color of days.

Hint: Use <table border="1">, <tr>, <th>, <td>. Use background-color in CSS.

5. Subject List with Nested Table

Display "Computer Engineering Subjects" as main list. Inside one list item, show a **nested table** with Theory and Practical marks. Use **HTML** only for structure.

Hint: Use `<ul>` or `<ol>`. Inside `<li>`, create another `<table>`.

6. Simple Registration Form (No Validation)

Create a form with name, roll number, and branch. Add a submit button. No JavaScript needed. Use **CSS** for spacing and alignment.

Hint: Use `<form>`, `<input type="text">`, `<input type="submit">`. Use margin and padding in CSS.

7. About Me Page with Internal CSS

Create an "About Me" page with your photo, name, and 3 hobbies listed. Use **internal CSS** for heading color and paragraph font size.

Hint: Use `<style>` tag. Set `h1 {color: blue;}`, `p {font-size: 18px;}`.

8. Recipe Card

Display a simple recipe (e.g., Tea or Sandwich). Use **HTML** for ingredients list (unordered list) and steps (ordered list). Use **external CSS** for card border and shadow.

Hint: Card can be a `<div>` with border, border-radius, box-shadow.

9. Favorite Links Page

Create a webpage showing 3 of your favorite websites as hyperlinks. Each link should open in a new tab. Use **inline CSS** for link colors (visited, hover).

Hint: `<a href="url" target="_blank">`. Use `style="color: green;" inline`.

10. Department Contact Table

Create a table showing 3 faculty names and their email IDs. Apply **internal CSS** for alternate row background color (zebra striping).

Hint: Use `tr:nth-child(even) {background-color: #f2f2f2;}`.

11. Simple College Brochure

Design a small brochure with college name, image of campus, and a paragraph about the college. Use **external CSS** for all styling.

Hint: Create style.css file. Link using `<link rel="stylesheet" href="style.css">`.

12. Hobby Page with Text Formatting

Create a page titled "My Hobbies". Use **text formatting tags** like `<strong>`, `<em>`, `<mark>`, and `<del>`. Apply **inline CSS** for background.

Hint: `<mark>` highlights text, `<del>` strikes through. Use `style="background: lightyellow;"`.

Problems 13–22: HTML + CSS + JavaScript (Basic)

13. Simple Form with Empty Field Validation

Create a login form (username, password). Use **JavaScript** to check that neither field is empty when submit button is clicked. Show alert if empty.

Hint: Use `onsubmit` event. Check `if(username == "") { alert("Empty"); return false; }`.

14. Greeting Message Based on Time

Use **JavaScript** to display "Good Morning", "Good Afternoon", or "Good Evening" based on current system time on webpage load.

Hint: Use `new Date().getHours()`. Display message using `document.write()` or `innerHTML`.

15. Button Click Counter

Create a button and a paragraph. Every time button is clicked, increase counter value by 1 and display "Button clicked X times".

Hint: Use `let count = 0;` and `onclick` event. Update `innerText`.

16. Change Background Color on Button Click

Create a webpage with a button. Each click changes background color to a different color (use array of 3–4 colors).

Hint: `document.body.style.backgroundColor = colors[index]`. Loop colors using `modulo`.

17. Simple Addition Calculator

Create two input boxes and an "Add" button. When clicked, display sum of two numbers using **JavaScript**.

Hint: Use `parseInt()` or `parseFloat()`. `Sum = num1 + num2`.

18. Display Current Date and Time

Use **JavaScript** to display current date and time in a <div> when page loads. Format: DD/MM/YYYY HH:MM:SS.

Hint: Use new Date() and getDate(), getMonth()+1, getFullYear(), getHours(), etc.

19. Number Comparison

Take two numbers from user using prompts. Use **JavaScript** to display which number is greater, or if both are equal.

Hint: Use prompt() to take input. Use if-else for comparison.

20. Simple Age Check

Create an HTML form with age input and submit button. Use **JavaScript** to check if age ≥ 18 . Show "Eligible to vote" or "Not eligible".

Hint: Use onclick or onsubmit. Compare using if(age >= 18).

21. Show/Hide Paragraph

Create a paragraph and a button. On button click, hide the paragraph. If clicked again, show it again (toggle).

Hint: Use display = "none" and display = "block". Check current style.

22. Simple Multiplication Table

Take a number from user using textbox. On button click, display its multiplication table from 1 to 10 using **JavaScript** loop.

Hint: Use for loop. Display result in <div> using innerHTML +=.

Problems 23–27: HTML + Bootstrap (Basic)

23. Responsive Navbar using Bootstrap

Create a simple responsive navbar with Home, About, Contact links using **Bootstrap**. Add a brand name "My Website".

Hint: Use Bootstrap CDN. Use <nav class="navbar navbar-expand-lg">.

24. Bootstrap Grid Layout (2 Columns)

Create a webpage with 2 equal columns using **Bootstrap Grid**. Left column shows text "About Me", right column shows "My Skills". Use cards inside.

Hint: Use `<div class="container">` and `<div class="row">`. Columns: `col-md-6`.

25. Bootstrap Button Styling

Create 3 buttons: Primary, Success, Danger using **Bootstrap classes**. On clicking any button, show an alert "Button clicked" using **JavaScript**.

Hint: Use `btn btn-primary`, `btn btn-success`, `btn btn-danger`. Add onclick alert.

26. Bootstrap Form with Basic Styling

Create a simple contact form (name, email, message) using **Bootstrap form classes**. Make it responsive and centered.

Hint: Use `form-control` class for inputs. Use `mb-3` for margin.

27. Bootstrap Alert Component

Create a page with a button. When clicked, show a **Bootstrap success alert** saying "Form submitted successfully!" (can be static for demonstration).

Hint: Use `<div class="alert alert-success">`. Initially hide it, show on button click.

Problems 28–32: PHP Only (Very Basic)

28. Display Welcome Message using PHP

Write a **PHP** script to display "Welcome to Web Development Practical Exam" on the browser.

Hint: `<?php echo "Welcome..."; ?>`. Save as .php file.

29. Show Current Date in PHP

Write a **PHP** script to display today's date in format: 08-05-2026.

Hint: `echo date('d-m-Y');`

30. Simple POST Form in PHP

Create an HTML form asking for user's name. On submit, **PHP** displays "Hello [name]". Use POST method.

Hint: Use `$_POST['name']`. Check `if($_SERVER["REQUEST_METHOD"] == "POST")`.

31. Print Array using PHP

Create an indexed array of 3 colors (Red, Green, Blue). Use **PHP** foreach loop to display them in an unordered list.

Hint: \$colors = array("Red", "Green", "Blue"); then echo inside loop.

32. Simple String Length using PHP

Accept a word from HTML form. Use **PHP** to display its length using strlen().

Hint: echo strlen(\$_POST['word']);

Problems 33–40: HTML + CSS + PHP (Basic Integration)

33. Simple Interest Calculator (PHP + HTML + CSS)

Create a styled HTML form (principal, rate, time). On submit, calculate simple interest using **PHP** and display result on same page.

Hint: Formula: $(\$p * \$r * \$t) / 100$. Use isset(\$_POST['submit']).

34. Student Result Display using PHP Array

Store marks for 3 subjects in a **PHP indexed array**. Calculate total and percentage. Display in HTML table with **CSS** styling.

Hint: Use array(70, 80, 65). Total = array_sum(). Percentage = (total/300)*100.

35. Even-Odd Checker (PHP + CSS)

Create a number input form. Use **PHP** to check if number is even or odd. Style the output with colored background using **CSS**.

Hint: Use modulo \$num % 2 == 0. Apply CSS class dynamically.

36. Simple Login Check (PHP + HTML + CSS)

Create a login form (username: "admin", password: "12345"). Use **PHP** to check credentials and display success or error message. Style with **CSS**.

Hint: Hardcoded check: if(\$user == "admin" && \$pass == "12345").

37. Reverse String using PHP + Form

Accept any word from HTML form. Use **PHP** `strrev()` to display reversed string. Apply **CSS** for form styling.

Hint: `echo strrev($_POST['word']);`

38. Vowel Counter using PHP

Create a form to accept a sentence. Use **PHP** to count number of vowels (a, e, i, o, u) in it. Display count with **CSS** styling.

Hint: Use `strlen()` and loop, or `substr_count()` with `strtolower()`.

39. Simple Marksheet with Grade (PHP + CSS)

Take marks of 3 subjects via HTML form. Use **PHP** to calculate total, percentage, and grade (A/B/C/D/F). Display in styled table.

Hint: Grade: ≥ 75 A, ≥ 60 B, ≥ 45 C, ≥ 35 D, else F.

40. Favorite Subject Storage using Session (PHP + HTML + CSS)

Create a form to enter favorite subject. Use **PHP session** to store it and display "Your favorite subject is [subject]" on next page. Add basic **CSS**.

Hint: Start `session_start()`. Store `$_SESSION['subject'] = $_POST['subject']`. Retrieve and display.
